## Preface

Uniform Parole Reports (UPR) provides comparable state-bystate data to assist decisionmakers, program managers, and citizens in evaluating their jurisdiction's policies and programs. The scope of the project has expanded from its beginnings as an experiment in gathering and reporting state parole board data.

The National Council on Crime and Delinquency (NCCD), with funds from the National Institute of Mental Health (NIMH), began the Uniform Parole Reports in 1966. At that time, it was intended not as a permanent reporting system but as an effort limited to parole outcome data. During the 6 years of NIMH funding (through 1972), the project continued to focus on 1-, 2-, and 3-year followup studies of parolees. Parole boards were the primary users of these data; NCCD provided annual parole outcome tables to parole boards participating in the program. During this time, NCCD also joined the Federal Parole Commission in research on parole decisionmaking that led to the development of the nation's first parole guidelines. Parole and sentencing guidelines in use or under development today have their roots in the early UPR project.

Beginning in 1973, UPR was funded by the National Criminal Justice Information and Statistics Service (renamed the Bureau of Justice Statistics in 1980). During the mid-70's, the emphasis of the project began to evolve from the parole decisionmaking to national reporting on all facets of parole.

The UPR's current publication program provides three levels of detail. The series on Parole in the United States provides an overview of the parole system. The series on Characteristics of Persons Entering Parole provides a detailed look at persons entering parole. UPR publishes occasional special studies that range from legislative reviews to formal tests of hypotheses using offender-based data.

Parole in the United States: 1976 and 1977 (July 1978) was the first in this annual series of summary statistics on the

nation's parole population and population movement.

Characteristics of the Parole Population, 1977 (April 1979) was the first annual report from the offender-based data system that covers individual parole status, conviction offense, sentence served in prison, and selected demographic and socioeconomic characteristics of persons entering parole. The report summarizes the characteristics of person who entered parole during 1976 and 3-, 2-, and 1-year parole outcomes for persons who entered parole during 1974, 1975, and 1976.

The second report, Characteristics of the Parole Population, 1978 (December 1980), summarizes the characteristics of persons who entered parole during 1977, 1-, 2-, and 3-year parole outcomes for those who entered parole during 1975 and 1-year parole outcomes for those who entered parole during 1977. During this period, UPR gathered entry and 1-year followup data simultaneously. For this reason, the title year in each of these reports is the year of the 1 year followup of the most recent entry group.

To identify the populations unambiguously, this report, the third in the series, is entitled Characteristics of Persons Entering Parole During 1978 and 1979. It summarizes the characteristics of persons who entered parole during 1978 and 1979. It traces the parolee from sentencing through prison admission and on to release to parole.

UPR is one of three major reporting systems that describe the convicted population. It is undergoing a change that will link its data more directly to two other adult correction data systems-National Prisoner Statistics and National Probation Reports. This will yield a more consistent and comprehensive description of convicted adults as they enter and exit all facets of correctional supervision. The result will be better information for the states to use in allocating scarce correctional resources and in evaluating the consequences of these allocations.

## From prison to parole

1.1

un de la companya de

Parole is the principal route out of prison. In 1979 there were 144,000 prison releases; 110,000 (76 percent) of them were releases to parole (see Figure 1), either by the decision of a parole board (discretionary parole) or by provision of the statute under which they were sentenced (mandatory parole). The characteristics of persons who entered parole (both discretionary and mandatory) during 1978 and 1979 are the subject of this report.

Nationwide, the use of parole did not change from 1978

to 1979 (see Table 1). However, with California's shift to determinate sentencing, the proportion of parole releases that were mandatory increased dramatically. Proportionate use of mandatory parole also increased in Illinois, Virginia, and Texas. In future years, a similar increase will occur in Indiana as inmates are released under its determinate sentencing statute.

The use of parole varies widely among states. Arizona, Georgia, Louisiana, Maine, and Missouri use parole for less 2 From prison to parole

than 40 percent of their outgoing prisoners. By contrast, Alaska, California, New York, New Jersey, and Washington use parole for more than 95 percent of their community releases (see Figure 2).

Releases to parole, other conditional releases, and unconditional releases combined to form "community releases" (see Table 1). Excluded from this group were deaths, escapes, AWOLs, transfers, and releases on appeal or bond. Similarly, new court commitments, parole violators, and violators of other forms of conditional release were combined to form "community admissions" (see Table 2). Transfers, return from appeal or bond, and excapes and AWOLs returned were excluded from this group. Each of the subgroups excluded from releases and admissions is in some way distinctive and not characteristic of the movement between prison and the community. The remainder of this report will discuss only community releases and admissions as defined above.

Persons entering parole may be counted using several data sources. Three different estimates of this population are given in appendix Tables A.1 and B.1. The estimate used in

computing the percentage use of parole is based on figures provided by National Prisoner Statistics that compare the number of inmates released onto parole status with total prison exits. Similar estimates are reported to Uniform Parole Reports based on an annual survey of paroling agencies of entries to their caseloads. The third estimate of persons entering parole was developed for this report from a parole reporting system that consists of information collected on each individual parolee (offender-based parole records).

Three-fifths of the states participated in the UPR offender-based system for 1978 and two less in 1979 (see appendix Table D.1). For most states reporting to all three systems, the estimates are close. However, because of the missing states, the description of persons entering parole during 1978 and 1979 drawn from the offender-based reporting system is limited to parolees of participating states and is not a national profile. Sampling bias is a consideration for the 13 states which provide data on a sample of cases. The number of cases reported and the weights used to estimate the total parole entry population in these states are given in appendix

A Section of the sect

Prison releases: Sentenced prisoners released from state and federal institutional jurisdiction during 1978 and 1979, by type of release Table 1

		1978			1979	
Type of release	Number	Total releases (percent)	Community releases (percent)	Number	Total releases (percent)	Community releases (percent)

Sources: Prisoners in State and Federal Institutions on December 31, 1978, Tables 10 and 13, and Prisoners in State and Federal Institutions on December 31, 1979, Tables 10 and 13.

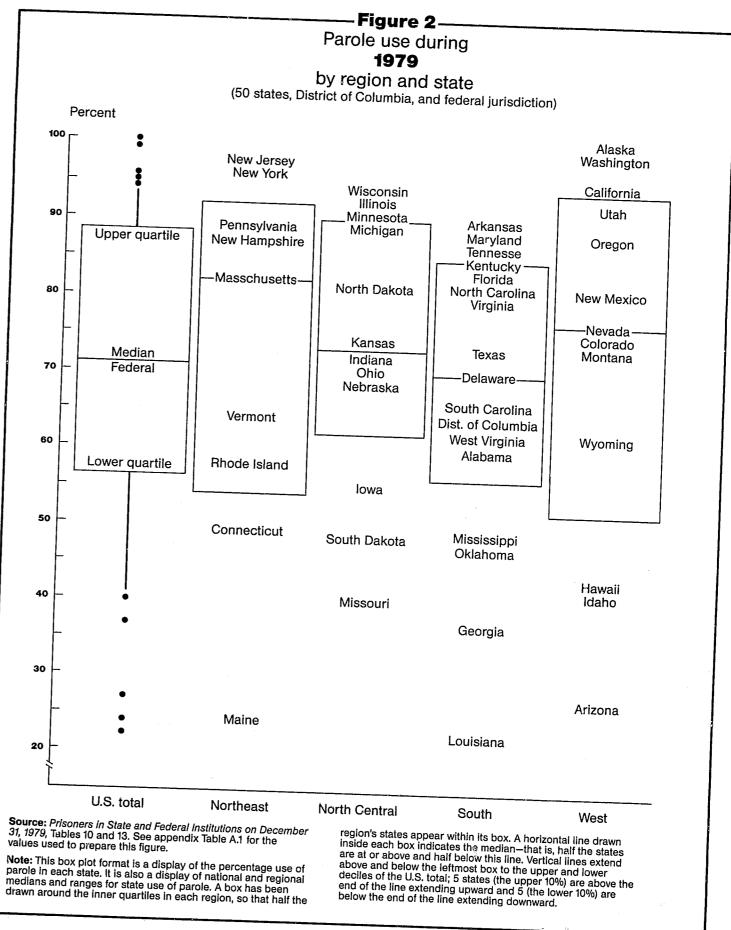

Notes: <sup>1</sup>Includes conditional and unconditional releases. Excludes deaths, escapes, AWOLS, transfers, and persons released to appeal or bond.

<sup>2</sup>Predominately pre-parole release by correctional authorities (e.g., furloughs, work release), conditional pardons, and court ordered conditional releases.

<sup>3</sup>Predominately commutation or court ordered release.

 $^{4}$ A reduction from 1,565 to 425 prisoners transferred to other jurisdictions from the District of Columbia is largely responsible for the overall reduction from 1978 to 1979.

<sup>5</sup>Includes deaths, persons released on appeal or bond, and also serves as an adjustment residual. The increase in the number of other releases is primarily due to 3,046 releases to appeal or bond and court movements not occurring on the same day in California in 1979, where only 235 other releases were reported in 1978.

Movement of persons between prison and parole 3

4 From prison to parole

Source: Prisoners in State and Federal Institutions on December 31, 1979, Tables 10 and 16. See appendix Table A.2 for the values used to prepare this figure

Note: This box plot format is a display of the percentage of returned parole violators among prison admittees. It is also a display of national and regional medians and ranges for the percentage of returned parole violators. A box has been drawn around the inner quartiles in each region, so that half the

region's states appear within its box. A horizontal line drawn inside each box indicates the median-that is, half the states are at or above and half below this line. Vertical lines extend above and below the leftmost box to the upper and lower deciles of the U.S. total; 5 states (the upper 10%) are above the end of the line extending upward and 5 (the lower 10%) are below the end of the line extending downward.

Tables D.2 and D.3 for the 1979 and 1978 parole entry populations, respectively.

#### From parole to prison

Some persons entering parole become prison admissions. They violate parole and are returned to prison, often with a new sentence. In both 1978 and 1979, most admissions to prison were new court commitments (see Table 2). Of each 100 community admissions to prison, 16 were parole violators, of whom 7 were returned to prison with a new sentence.

Nationwide, the proportion of returned parole violators remained relatively constant over the 2 years. However, among states, the proportion of returned parole violators during 1979 ranged from less than 5 percent in Alabama, Oklahoma, and Wyoming to more than 30 percent in Illinois, Minnesota, and New Jersey (see Figure 3). States in the South generally have a smaller percentage of their admissions made up of parole violators; but then there is also less use of release to parole in the South (see Figures 2 and 3).

Parolees who are returned to prison without a new sentence are returned for violating the conditions of their parole (technical violators). When an individual has committed an offense while on parole, whether or not that person is counted as a parolee returned with a new sentence may depend upon the state's administrative procedures. In some jurisdictions, parolees admitted without a new sentence may be returned in lieu of a new sentence or with new criminal

#### Prison admissions: Sentenced prisoners admitted to state and federal institutional Table 2 jurisdiction during 1978 and 1979, by type of admission

		1978			1979	<u> </u>

Note: Includes new court commitments and parole violators returned. Excludes escapes, AWOLS, transfers, and persons

<sup>2</sup>Includes parole and other conditional release violators returned.

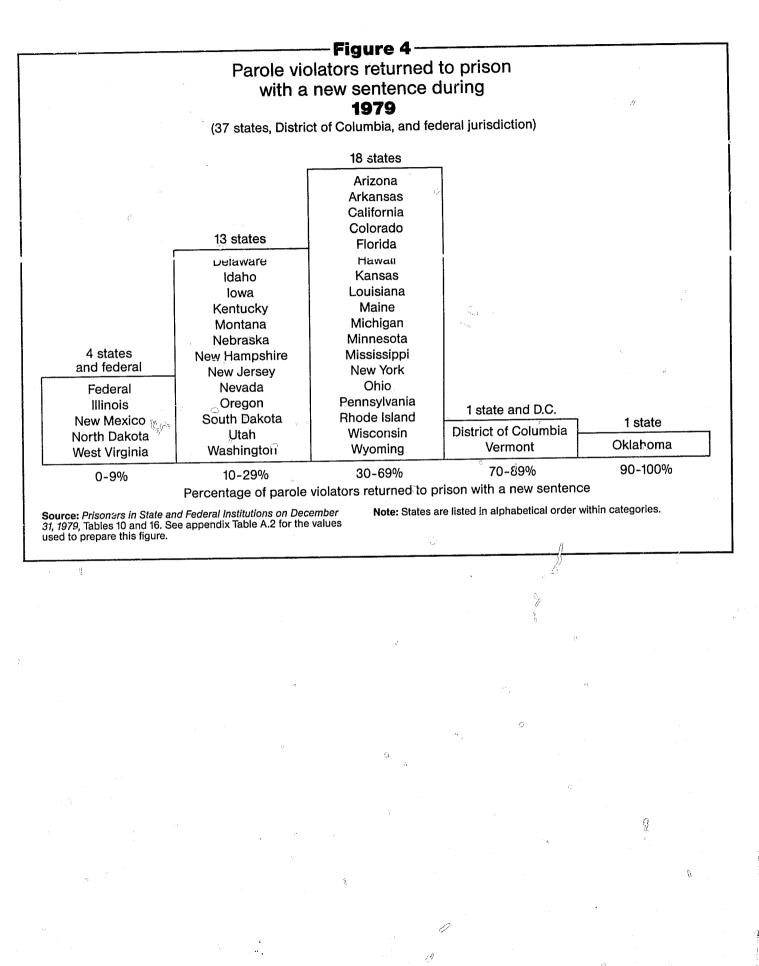

<sup>3</sup>Includes persons returned from appeal or bond. The increase in the number of other admissions is largely due to 2,977 returns from appeal or bond and court movements not occurring on the same day in California in 1979, where none were

## Movement of persons between prison and parole 5

charges pending. Also, jurisdictions providing higher levels of supervision will tend to generate more technical violators since the conditions of parole will often be more restrictive and the degree of parolee surveillance more extensive. Figure 4 shows the wide variation among states in the percentage of parole violators returned with a new sentence.

It is likely that variation among the states is, in part, a reporting artifact. One of the advantages of having multiple sources of data on a given characteristic is that the accuracy of the data can be verified. For example, in appendix Tables A.2 and B.2, the last column shows the estimated number of parole violators returned as reported in Parole in the United States: 1979. These estimates are reasonable close to those reported by NPS. However, if discrepancies show up, they require explanation or further investigation. For example, the count of parolees reported to be returned to prison differs among reporting systems. The NPS data show that in 1979 Georgia, North Carolina, South Carolina, Texas, and Virginia returned 3,817 parolees to prison, while UPR data show less than a fifth of that number (see appendix Table A.4). While these data are not directly comparable, the larger disparity between the two reporting systems may reflect different definitions of the term "returned to prison." For example, one state might count parolees returned to prison to await trial on new criminal charges or a hearing on alleged violations of parole conditions. Another state might not count the same parolee until the trial or hearing was concluded.

6 From prison to parole

## **Conviction and sentencing**

Sentences reflect, among other factors, the severity of the crime for which the offender was convicted. For the 1978 and 1979 parolees, four measures of offense seriousness are available-commitment offense, multiple sentences, prior prison commitments, and the maximum sentence imposed by the judge.

#### **Commitment offense**

The commitment offense is the one for which the parolee was incarcerated. In the case of multiple offenses, the commitment offense is the most serious one, the one carrying the longest sentence.

The commitment offense characteristics of parolees vary considerably among states. The proportion of persons entering parole with a commitment for a crime against persons among the states reporting on 1979 parolees ranged from just under 20 percent for South Dakota to more than 50 percent for Maine (see Figure 5). These percentages do not necessarily reflect the commitment offense characteristics of the states' prison releases or prison populations because each of these states used parole for less than half its prison releases. By contrast, because New Jersey used parole for more than 95 percent of its prison releases, its high proportion of violent offenders among new parolees is a direct measure of the distribution among all releases and an indirect indication of the distribution within its prison population.

Three basic offense categories appear throughout this report - crimes against persons, crimes against property, and all other crimes. The most prevalent commitment offense in each basic category (robbery among crimes against persons, burglary among property crimes, and narcotics among all other crimes) is shown separately in some of the figures and tables. For example, in appendix Tables A.5, A.8, B.5, and B.8 sentences imposed and time served are shown for these three selected offenses.

#### **Multiple sentences**

Most persons entering parole had been sentenced for a single commitment offense. The multiple sentence rate is less than 20 percent in most reporting states (see Figure 6). This does not necessarily reflect the pattern of criminality that lies behind the sentence. Variations among states and local policies on offense charging, plea bargaining, and sentencing may affect variation in the officially recorded sentence as much as does variation in individual criminal behavior.

### Prior prison commitments

The percentage of the parole entry population with one or more prior commitments varies widely (see Figure 7). It varies from 12 percent to 61 percent among the 21 states for which 1979 data are available. Only Maine reports more than half its parole entry population to have prior prison commitments, and this largely reflects the special nature of the decreasing proportion of Maine's prison population who are eligible for parole. In 14 of the 21 states, less than 30 percent of the persons entering parole have priors. State specific data for prior prison commitments are given in appendix Tables A.3 (1979) and B.3 (1978).

From the state rates available, it appears that generally no more than a third of those entering parole during 1979 were convicted of a crime against persons, no more than 20 percent were serving multiple sentences, and no more than 30 percent had a prior record. From these three indicators it appears that persons entering parole do not fit the popular image of the dangerous criminal. This pattern may reflect the composition of the whole prison pop ilation, but in some states it may also be due to the use of parole for less serious offenders.

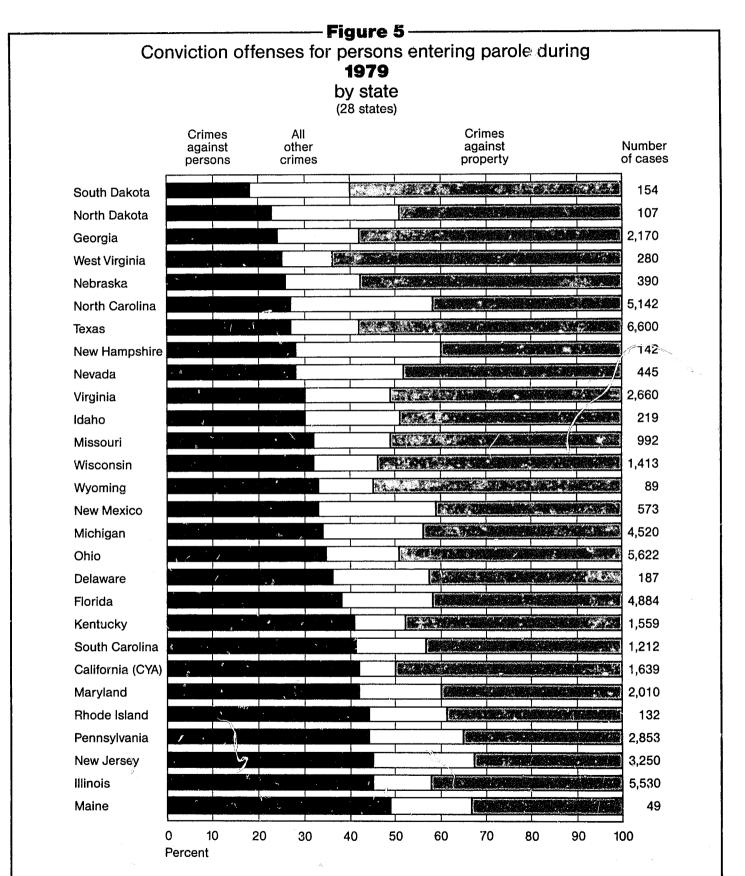

#### **Maximum sentence**

Each sentence may have several aspects. One is the length of the symbolic sentence-the maximum sentence imposed under the law (see Figure 8). Median maximum sentences for all crimes range from less than 3 to more than 7 years; the midpoint for all states is between 4 and 5 years.

The pattern of sentences for burglary is very similar to those for all crimes-burglary is the highest volume offense in most jurisdictions, and it appears to be representative of the sentencing patterns for all crimes. Of the 23 states reporting, only 2 states have medians for burglary over 7 years; 7 have medians less than 3 years. The median of state medians for burglary, as for all offenses, is between 4 and 5 years. Robbery-typically the second highest volume offense-is treated much more seriously, as are crimes against persons generally. Of the 27 states, 14 showed median sentences for robbery of more than 7 years, only 1 was less than 3 years, and the median among the 27 states is 6 years. The detailed data are given in appendix, Tables A.4, A.5, B.4, and B.5.

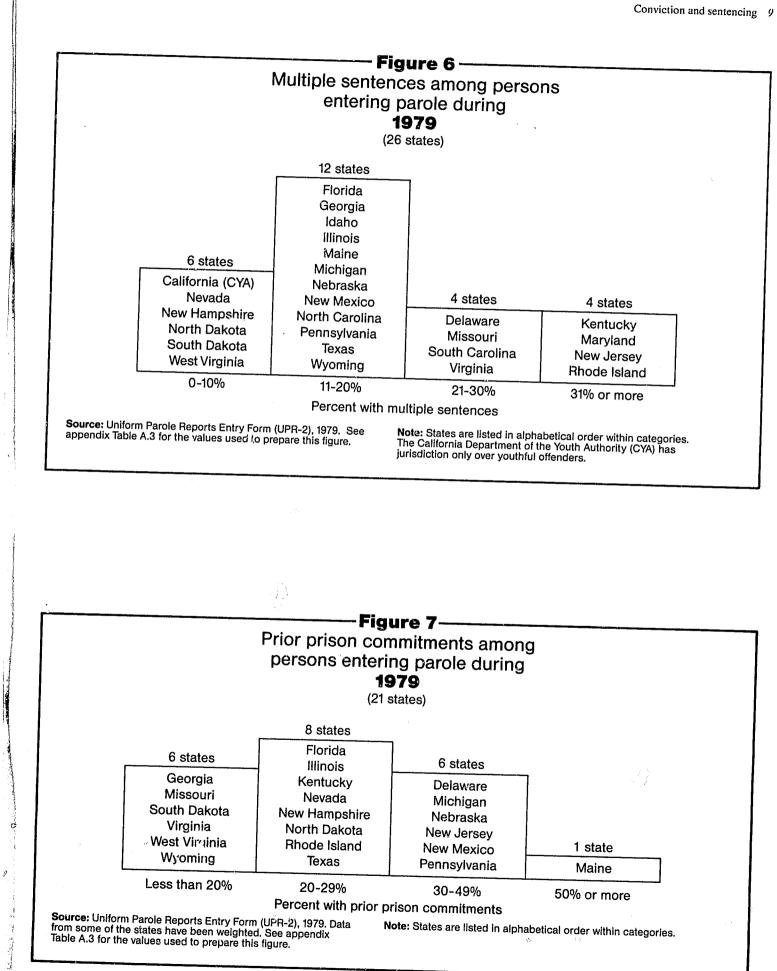

In addition to the maximum, a sentence may also have a minimum term and a minimum period until parole can first be considered. In some jurisdictions, these three are closely

#### 8 Commitment offense

Source: Uniform Parole Reports Entry Form (UPR-2), 1979. Data from some of the states have been weighted. See appendix Table A.3 for the values used to prepare this figure and for the definitions of each offense group.

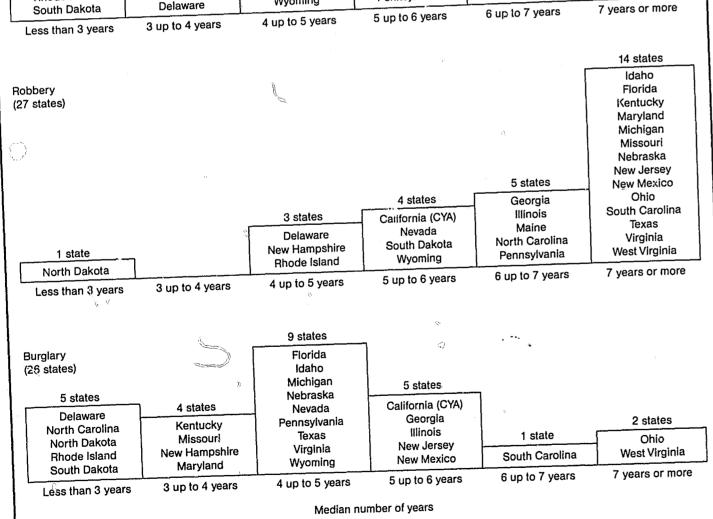

Note: The number of persons included in these percentages appears at the end of each bar. The California Department of the Youth Authority (CYA) has jurisdiction only over youthful offenders.

10 Maximum sentence

All crimes

and parole eligibility is not linked to the sentence (for example, linked-the minimum to maximum range is small and the have served 1 year). a different picture—the minimum to maximum range is large - Figure 8-Maximum sentence imposed on persons entering parole during 1979 for all crimes, robbery, and burglary 9 states 9 states California (CYA) Florida Georgia Maryland (27 states) Idaho Michigan Winois Missouri 3 states Kentucky Nebraska 4 states Nevada New Hampshire Ohio North Carolina New Jersey Texas 1 state South Carolina North Dakota New Mexico 1 state Virginia West Virginia Maine Rhode Island Pennsylvania Wyoming Delaware South Dakota 6 up to 7 years

Note: The number of persons used to compute the medians is enclosed in parentheses. States are listed in alphabetical order vithin categories. The California Department of the Youth Authority (CYA) has jurisdiction only over youthful offenders.

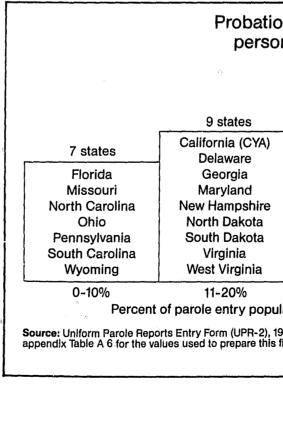

## Type of admission to prison and time served prior to release

For most persons entering parole during 1978 and 1979, the route from sentencing to prison to parole was straightforwardthe offender was convicted and sentenced, entered prison within a month (usually within a few days) after sentence was passed, served time in prison, and entered parole.

For a sizeable minority, the route was more circuitous; these were persons who were already under community supervision (parole or probation) before they entered prison. Some of these were apprehended, convicted, and committed for a new offense. Some were returned for violating the terms of their parole-they had been in prison before on the same sentence. Others had violated conditions of their probation and were being sent to prison for the first time. Because of these alternative routes, the discussion of time served in prison is preceded by an examination of the type of most recent admission to prison.

#### Type of most recent admission to prison

State rates for persons entering parole during 1979 whose most recent admission to prison involved a violation of parole

and a white and the second

minimum eligible parole date occurs after a fixed proportion of the minimum sentence has been served. Other states show all prisoners may be technically eligible for parole after they

1 200

or probation (with or without a new conviction) range from less than 10 percent to more than 40 percent (see Figure 9). Persons entering parole whose most recent admission to prison involved a violation include four groups: probation violators with a new sentence, probation violators with no new sentence, parole violators with a new sentence, and parole violators with no new sentence. Some jurisdictions have no probation violators among the persons entering parole in 1979 (California Department of the Youth Authority, Illinois, Maine, and North Carolina). Others have no parole violators (South Dakota and Wyoming). This variation suggests that detailed knowledge of state practice is necessary before any conclusions can be drawn (see detailed data in appendix Tables A.6 and B.6).

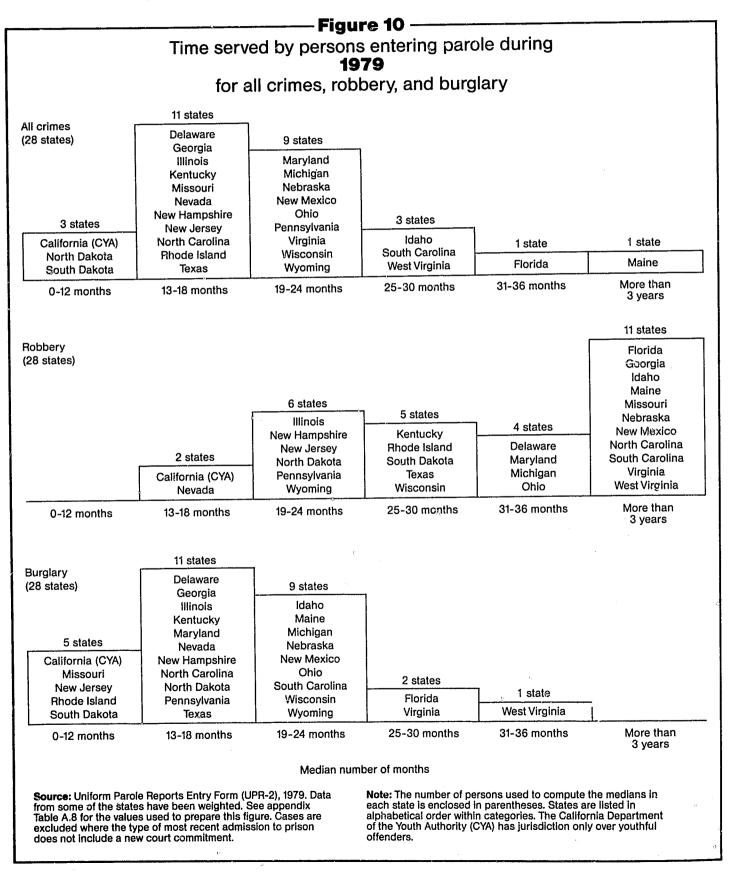

## Length of time served in prison

UPR collects data on the length of time parolees spend in prison prior to release to parole (see Figure 10 and appendix Tables A.7, A.8, B.7 and B.8). This measure of time served is an indicator of jurisdictional punishment policy. It is computed

or parole violations or parole violations s entering parole <b>1979</b> (28 states)	•

12 Length of time served in prison

as the time between the date of prison admission and the date of parole entry, and time served in jail preceding imprisonment is added when known. Reparolees whose admission to prison did not include a new sentence have been excluded from all computations; parolees in this group typically serve brief sentences for a parole or probation violation that is unrelated

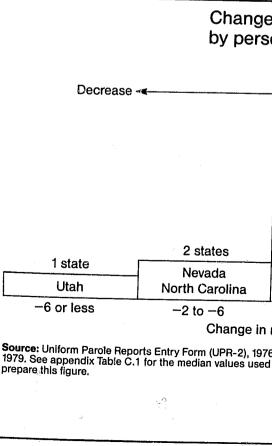

in length to the seriousness of the original commitment offense. Their inclusion would lower the group median and distort the picture of time served by offense (see appendix D).

For persons entering parole during 1979, the 5 states with the highest medians for all crimes (Florida, Idaho, Maine, South Carolina, and West Virginia) all have medians for robbery and burglary at the upper end of the distribution. Of the 3 jurisdictions at the low end of the distribution of medians, North Dakota and the California Department of the Youth Authority show similar consistency; they are low for all offenses and low for both robbery and burglary.

Of the 8 jurisdictions at the extremes of the overall time served distribution, 5 are states with very small numbers of parole entries-Idaho, Maine, North Dakota, South Dakota and West Virginia. One state, Florida, is among the largest in number of parole entries. Maine, whose determinate sentencing law precludes conditional release, is paroling only those whose sentences were imposed prior to the new law. The California Department of the Youth Authority is a specialized agency which handles only younger offenders.

The variations in time served among the states mirror to some degree the variations in sentencing among the states. Formal procedures or legal requirements often link time served to sentence length. For example, an offender may be required to serve a proportion of the sentence (or of the minimum sentence), such as a fourth or a third, before parole eligibility. Other states require no less than 1 year in prison or

set mandatory minimums for certain crimes or for special circumstances of a crime. Some states have structured parole board decisionmaking by establishing parole guidelines that set fixed ranges for different types of crimes. Other states have removed the release decision from the parole board and substituted terms set by the trial judge, the legislature, or a sentencing commission. (In Maine, offenders are released unconditionally after completion of their terms minus good time.)

The median number of months served in prison from 1976 to 1979 for all offenses combined is shown in Figure 11. These data represent time served in prison exclusive of time served in jail, and include all 31 states which contributed 3 or more years of time served data. Eleven states had an increase in the median of 2 to 6 months and 6 had an increase of 7 or more months. At the same time, 11 states remained essentially unchanged, and 3 showed a reduction of more than 1 month. The pattern of increase is general, but the cause may vary from state to state, as can be seen by looking at 3 states (Florida, Idaho, and Maine) that had both high medians in 1979 and rapid increases in time served from 1976 to 1979. In Florida, which introduced parole guidelines in 1978, time served rose before guidelines were introduced and continued to rise after their introduction. In Maine, time served rose because only persons sentenced prior to the passage of determinate sentencing in 1976 were eligible for release to parole. In Idaho, the time served rose without the introduction of either parole guidelines or determinate sentencing.

# **Demographic characteristics**

Prisoners live almost exclusively in a single-sex society in which most persons are in their twenties and thirties. Most are members of a minority group, and most have less education than the general population. This section covers four demographic characteristics-sex, age, race/ethnicity, and education - of the persons entering parole in 1978 and 1979 along with comparisons to prison and general populations where appropriate and available. The detailed data appear in appendix Tables A.9 and B.9.

#### Sex

In the states reporting 1979 UPR data, women made up 10 percent or less of the persons entering parole; the median proportion was about 5 percent and the interquartile range

was from 3.5 to 6.5 percent. From National Prisoner Statistics data appearing in Prisoners in State and Federal Institutions on December 31, 1979, Tables 10 and 11, a similar proportion of women appear to be entering prison, but the median state proportion of women in the yearend 1979 prison population is lower-less than 4 percent.

#### Age

The proportion of persons under age 21 entering parole in 1979 is shown in Figure 12. Note that Maine (at the bottom of the figure) has no entries younger than age 21; only lifers or other long termers continue to be paroled in Maine now that deteriminate sentencing with unconditional release has replaced parole. The California Department of the Youth

#### 16 Race/Ethnicity

Authority (at the top of the figure) only has jurisdiction over persons up to the age of 21; two-thirds of the parole entries from CYA were under 21.

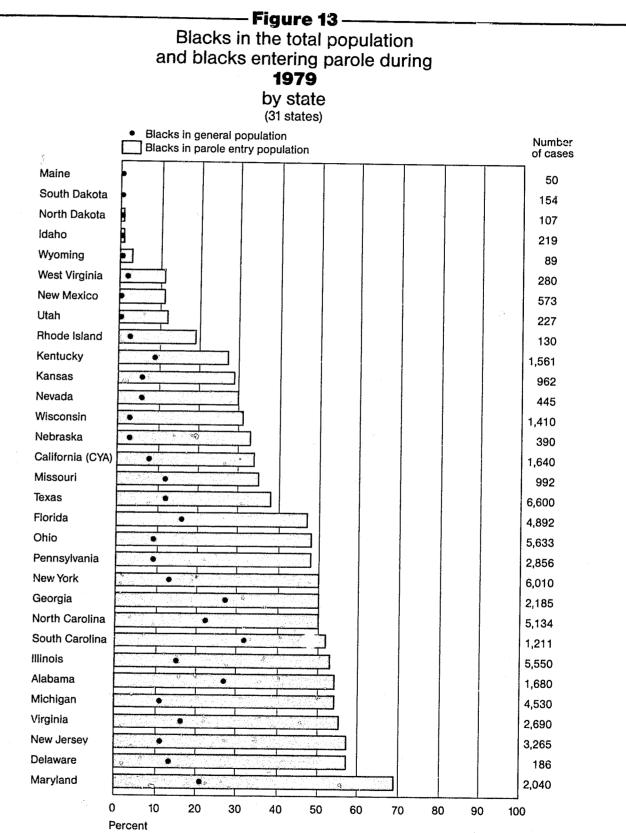

#### Race/Ethnicity

The UPR parole entry population includes 4 race/ethnicity groups-non-Hispanic whites, non-Hispanic blacks, Hispanics, and others (American Indians, Alaskan Natives, Asians, and Pacific Islanders). The percentage distribution of one of these groups-non-Hispanic blacks-among the persons entering parole in 1979 is represented by the bars in Figure 13. In virtually all of the states, the proportion of blacks in the

parole entry population is larger than the proportion of blacks among the state's general population (also shown in Figure 13); the extent of the difference, however, varies widely.

#### Education

The percent distribution of high school graduates for persons entering parole during 1979 is shown by the bars in Figure 14. The percentage of high school graduates in the general adult population is also shown. Typically, high school graduates make up between 20 percent and 30 percent of those persons entering parole and between 60 percent and 70 percent of the general adult population.

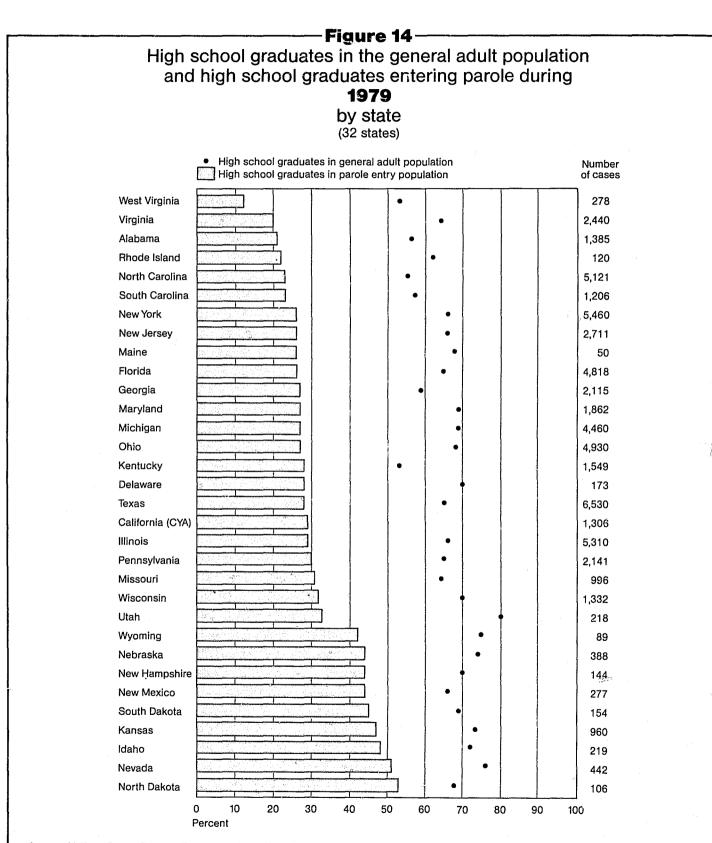

Source: Uniform Parole Reports Entry Form (UPR-2), 1979. Data from some of the states have been weighted. See Appendix Table A.9 for the values used to prepare this figure. Values for state percentages of blacks were computed from Statistical Abstracts of the United States, 1979, 100th Edition, Bureau of the Census, U.S. Department of Commerce, Table 37.

Demographic characteristics 17

Note: Alabama, Kansas, New York, and Utah did not submit 1979 data; the above values have been taken from the 1978 parole entry population for these states. The California Department of the Youth Authority (CYA) has jurisdiction only over youthful offenders. 18 Education

Sources: <sup>1</sup>Prisoners in State and Federal Institutions on December 31, 1979, Table 10. Includes only new court commitments and parole violators returned; escapees and AWOLs returned, prisoners returned on appeal or bond, transfers from other jurisdictions, and all other admissions have been excluded.

<sup>2</sup>Ibid., Table 16.

Note: This table is not directly comparable with Table A.G. The individuals counted in this table began their prison terms during 1979 and most will not be eligible for parole during 1979. The individuals in Table A.G began parole during 1979; most of these individuals had been committed to prison sometime earlier. Parole violators returned include persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

Table A.3 Commitment offense, multiple sentences, and prior prison commitments of persons entering parole during 1979, by state

Source: Uniform Parole Reports Entry Forms (UPR-2), 1979. Data from some of the states have been weighted. See Table D.1 in Appendix D. The number of missing values for conviction offense and prior prison commitments may be computed by subtracting the sum of the categories from the total. The parole entry population includes persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

Notes: <sup>1</sup>Includes murder, manslaughter, forcible rape, robbery, aggravated assault, and simple assault.

 $^2$  Includes larceny, theft, motor vehicle theft, arson, forgery, counterfeiting, fraud, embezzlement, and stolen property.

<sup>3</sup>Includes commercial and noncommercial sex offenses, alcohol law violations, weapon offense, escape, and all other offenses.

 $^{4}$ May include multiple counts of the same offense type where no second offense type was identified.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1979. The number of cases is the unweighted sample size used to compute the median and quartiles. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Notes: <sup>1</sup>Includes murder, manslaughter, forcible rape, robbery, aggravated assault, and simple assault.

<sup>3</sup>Includes commercial and non-commercial sex offenses, alcohol law violations, weapon offenses, escape, and all other offenses.

<sup>4</sup>Median statistics are presented in bold type. Fifty percent of the cases fall between the first quartile (25th per-centile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent fails above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls below and 25 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

<sup>2</sup>Includes larceny, theft, motor vehicle theft, arson, forgery, counterfeiting, fraud, embezzlement, and stolen property.

and the second second

Source: Uniform Parole Reports Entry Forms (UPR-2), 1979. The number of cases is the unweighted sample size used to compute the median and quartiles. Time served in jail prior to sentencing is used in the computation of time served. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Notes: <sup>1</sup>Includes murder, manslaughter, forcible rape, robbery, aggravated assault, and simple assault.

<sup>2</sup>Includes larceny, theft, motor vehicle theft, arson, forgery, counterfeiting, fraud, embezzlement, and stolen property.

<sup>3</sup>Includes commercial and non-commercial sex offenses, alcohol law violations, weapon offenses, escape, and all other offenses.

<sup>4</sup>Median statistics are presented in hold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls helow and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls helow and 75 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1979. The number of cases is the unweighted sample size used to compute the median and quartiles. Time served in jail prior to sentencing is used in the computation of time served. Medians and quartiles are not provided when the number of cases is 5 or less. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Note: <sup>1</sup>Median statistics are presented in bold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls below and 25 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1979. Data from some of the states have been weighted. See Table D.1 in Appendix D. The number of missing values for each characteristic may be computed by subtracting the sum of the categories from the total. The parole entry population includes persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

Note: <sup>1</sup>Includes American Indian, Alaskan Native, Asian, and Pacific Islander.

<sup>2</sup>Ibid., Table 16.

Note: This table is not directly comparable with Table 8.6. The individuals counted in this table began their prison terms during 1978 and most will not be eligible for parole during 1978. The individuals in Table 8.6 began parole during 1978; most of these individuals had been committed to prison sometime earlier. The parole entry population includes persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

#### Table B.2 / Appendix B .33

Table B.2 Parole violators returned to prison during 1978, by region and state

Sources: <sup>1</sup>Prisoners in State and Federal Institutions on December 31, 1978, Table 10. Includes only new court commitments and parole violators returned; escapees and AWOLs returned, prisoners returned on appeal or bond, transfers from other jurisdictions, and other admissions have been excluded.

<sup>3</sup>Aggregate Parole Data Form: 1978. The numbers in parenthesis are from National Prisoner Sta-tistics.

## Table 8.3 Commitment offense, multiple sentences, and prior prison commitments of persons entering parole during 1978, by state

Source: Uniform Parole Reports<sup>0</sup> Entry Forms (UPR-2), 1978. Data from some of the states have been weighted. See Table 0.2 in Appendix D. The number of missing values for conviction offense and prior record may be computed by subtracting the sum of the categories from the total. The parole entry population includes persons released from prison by suthority of a parole agency and those released from prison through mandatory conditional release.

 $\sim$ 

Motes: <sup>1</sup>Includes murded manslaughter, forcible rape, robbery, aggravated assault, and simple assault.

<sup>2</sup>Includes Tarceny, theft, motor vehicle theft, arson, forgery, counterfeiting, fraud, embezzlement, and stolen property.

<sup>3</sup>Includes commercial and non-commercial sex offenses, alcohol law violations, weapon offense, escape, and all other offenses.

<sup>4</sup>May include multiple counts of the same offense type where no second offense type was identified.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1978. The number of cases is the unweighted sample size used to compute the median and quartiles. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Notes: <sup>1</sup>Includes murder, manslaughter, forcible rape, robbery, aggravated assault, and simple assault.

<sup>2</sup>Includes larceny, theft, motor vehicle theft, arson, forgery, counterfeiting, fraud, embezziument, and stolen property.

<sup>3</sup>Includes commercial and non-commercial sex offenses, alcohol law violations, weapon offenses, escape, and all other offenses.

<sup>4</sup>Median statistics are presented in bold type. Fifty percent of the cases fall between the first quartile (25th per-centile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the boint in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls below and 25 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

## Table 8.5 Maximum sentence imposed on persons entering parole during 1978, by selected crime types and state (in months)

Source: Uniform Parole Reports Entry Forms (UPR-2), 1978. The number of cases is the unweighted sample size used to compute the median and quartiles. Medians and quartiles are not provided when the number of cases is 5 or less. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Mote: <sup>1</sup>Median statistics are presented in bold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1978. Data from some of the states have been weighted. See Table D.2 in Appendix D. This table is not directly comparable with Table B.2. The individuals counted in this table began parole during 1978 and therefore began their prison terms sometime earlier. The individ-uals counted in Table B.2 began their prison terms in 1978; most of these individuals were not eligible for parole during 1978. The parole entry population includes persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

Note: <sup>1</sup>Includes transfers from other jurisdictions, escapees and AWOLs returned, and prisoners returned on appeal or bond.

Source: Oniform Parche Reports Entry Forms (OPR-2), 1973. The number of cases is the unweighted sample size used to compute the methan and quertifies. Time served in jail prior to sentencing is used in the computation of time served. Cases are "excluded where the type of most recent admission to prison does not include a new court commitment.

Notes: "includes munder, mans aughter, forcible repe, robbery, aggrevated assault, and simple assault.

"int'ones 'arcans, theit, motor vehicle theit, arcon, forcarry, counterfeiting, fraud, embezzlement, and stolen property.

"incloses commercial and non-commercial sex offenses, alcohol law wiplations, weapon offenses, escape, and all other offenses.

"Mentar statistics are presented in bold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third coartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the first "without if months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third coartile (to the might of the median) is the point where 75 percent of the parole entry population falls below and 25 percent "a"'s above. Transmittion of the first and third quartiles," together with the median, is useful in understanding the shape and "wange of pack distribution.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1978. The number of cases is the unweighted sample size used to compute the median and quartiles. Time served in jail prior to sentencing is used in the computation of time served. Medians and quartiles are not provided when the number of cases is 5 or less. Cases are excluded where the type of most recent admission to prison does not include a new court commitment.

Note: <sup>1</sup>Median statistics are presented in hold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population for the parole entry population of the parole entry population for the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the first falls before the function of the parole entry population falls below and 75 percent falls above. falls below and 25 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution.

Source: Uniform Parole Reports Entry Forms (UPR-2), 1978. Data from some of the States has been weighted. See Table D.2 in Appen-dix D. The number of missing values for each characteristic may be computed by subtracting the sum of the categories from the total. The parole entry population includes persons released from prison by authority of a parole agency and those released from prison through mandatory conditional release.

Note: <sup>1</sup>Includes American Indian, Alaskan Native, Asian, and Pacific Islander.

Table C.1 Time served in prison by persons entering parole during 1976, 1977 1977, 1978, and 1979, for all crime types, by state (in months)

Source: Uniform Parole Reports Entry Forms (UPR-2). The number of cases is the unweighted sample size used to compute the median and quartiles. Some of the figures reported in this table for 1976 and 1977 may differ from those reported in <u>Characteristics of the Parole Population: 1977</u> and <u>Characteristics of the Parole Population: 1978</u>. The median number of months served in prison excludes persons on reparole on their original sentence for all four years presented. The figures in the earlier reports did not. Some of the figures reported in this table for 1978 and 1979 may differ from those re-ported in Tables A.8, A.9, B.8, and B.9. Net time credits allowed from jail by judge or statute were not collected prior table. Time served in jail prior to sentencing (i.e., net time credits) for 1978 and 1979 is presented in Table C.2.

Note: <sup>1</sup>Median statistics are presented in hold type. Fifty percent of the cases fall between the first quartile (25th percentile) and the third quartile (75th percentile). The first quartile (to the left of the median) may be interpreted as the point in the distribution of months served where 25 percent of the parole entry population falls below and 75 percent falls above. The third quartile (to the right of the median) is the point where 75 percent of the parole entry population falls below and 75 percent falls below and 25 percent falls above. Examination of the first and third quartiles, together with the median, is useful in understanding the shape and range of each distribution. understanding the shape and range of each distribution.

#### Exhibits

D.1 Uniform Parole Reports Entry Form (UPR-2)

## Data collection methods and forms

#### Sources of data

Parole/corrections agencies in participating states (listed in Table D.1) provide data to UPR voluntarily. The UPR data collection form for entry data appears as Exhibit D.1. Data are reported either on these forms or on machine readable tape.

#### Sample design

Some of the states using handscored entry data forms do not report data on all persons entering parole. These states submit lists of names of all persons entering parole; these lists provide the sampling from from which random samples are selected. The states that submit automated data include all persons entering parole; however, subsequent followup data are based on random samples.

Sample sizes are determined by the size of the state's parole entry population, the completeness of the data, and the method by which the data are submitted. A standard random number generating software package is used to identify the specific cases to be included in each sample; all cases have an equal probability of being selected. (A few states unable to supply simple random samples supply stratified samples with strata defined by either the offender's date of parole entry or by sex. All cases within a given stratum have equal probability of being selected.)

#### Weighting

Since many states provide UPR with sample data, their complete entry population sizes have been estimated with the use of a single, multiplicative weighting factor. (States which provide stratified samples are assigned individual weights for each stratum.) Weights are computed from the inverse of the sampling proportion for each participating state. Each case is then weighted, enlarging its representation in all parole entry populations and subpopulations in this report. All tables indicating "number of cases" reflect the weighted figures.

Tables D.2 and D.3 display the sampling design, weights, and estimated parole entry populations for the **1979** and **1978** parole entry populations. Note that when the weight is computed from the inverse of the sampling proportion, the number of months reported is taken into account. The estimated parole entry population sizes are the products of the weights and the corresponding number of cases reported.

#### Missing data

Data items may be missing because they are unreported or miscoded or because of panel loss. In addition, two small subpopulations have been designated as missing in all statistical tables.

Unreported and miscoded data. Specific data items which are not reported to UPR due to their unavailability are designated as missing and are not represented in any of the tables in this report. Several of the variables reported by UPR are created from two or more component variables. The parole outcome measure, for example, is a variable created from responses to three different followup questions. Created variables have been designated as missing if any of their component parts are missing.

In rare instances variables are miscoded or transcribed incorrectly at the time of data entry and consequently fall out of the accepted range of values. These variables are designated as missing and are not reported in any of the statistical tables in this report.

**Panel loss.** Panel loss occurs either because data for a sampled case were not submitted or, in the case of parole status data for the 1978 parole entry populations, because followup data were not submitted.

In rare instances, panel loss is due to the submission of inappropriate cases. When this happens, the state's parole entry population as initially reported differs from the true universe of persons entering parole. Occasionally the original parole entry lists include persons scheduled for parole entry who did not actually enter the parole system. Sometimes parolees whose names are provided on the original parole entry lists are transferred to another jurisdiction.

**Missing subpopulations.** Some states have provided UPR with a small number of cases who have been paroled to a custody detainer. These cases are not included in the statistical breakdowns; they are, however, represented in the estimation of the parole entry population sizes.

Similarly, cases where the release to parole was made by neither a parole authority nor a mandatory release program are included only in the estimate of the population sizes and not in the statistical summaries.

#### Updating of records

Values for some cases may occasionally be updated or altered within the followup period. Although updating is a continuous process, some corrections are provided only after the annual submission of data and hence are not included in the reported statistics. The magnitude of this type of error is quite small.

#### Time served and sentence length

Time served as displayed in appendix Tables A.7, A.8, B.7, and B.8 is the sum of time served in prison and time served in jail as credited toward a sentence. Some states do not provide UPR with jail credit data for all cases; time served is computed using jail credits only when they are provided. The time served measure always includes the time served in prison; it is only designated as missing if the time served in prison is missing. Time served statistics for 1976 to 1979 which appear in appendix Table C.1 have been computed without jail credit. Since jail credit data were not collected prior to 1978, this has been done to aid in year-to-year comparisons.

The maximum sentence length as displayed in appendix Tables A.4, A.5, B.4, and B.5 is the sum of the length of the maximum sentence for each offense to be served consecutively (based on the aggregate maximum release date) and the time served in jail as credited toward a sentence. It is computed using jail credit only when provided. The maximum sentence measure always includes sentence length based on the aggregate maximum release date and is only designated as missing if that element is missing.

Time served and maximum sentence length are computed only for individual offenders whose type of admission to prison includes a new conviction. Cases where the type of admission is for a parole or probation violation with no new sentence or where the imposition of a new sentence is not known, have been excluded. Time served for these cases cannot be accurately measured since their original dates of parole are not available. Data collection methods and forms 47

Dashes appear in all time served and maximum sentence tables where the number of cases does not exceed 5.

#### Ordering of states

The ordering of states for all tables in this report is displayed in Table D.4. This regional and subregional ordering, commonly used in Bureau of the Census reports, is based on groupings of contiguous states. 48 Appendix D / Table D.1
