May 1991

Author's Note

This report is based on the Offender-Based Transaction Statistics (OBTS) data base. If an offender is arrested for more than one offense, e.g., robbery and aggravated assault, OBTS follows the most serious offense at arrest as determined by the Bureau of Justice Statistics. For each arrest of an offender, OBTS has one case. For this reason OBTS can only be analyzed on a case by case basis and not a individual by individual basis.

The sentences that are in OBTS are based on a combination of all convicted offenses. This analysis only shows the most serious offense at the time of arrest. For instance, the sentence an offender receives may be based on three offenses, but OBTS will only show one — the most serious offense at arrest. The sentence an offender is given is based on many factors, e.g., criminal history of the offender, severity of the crime, the number of offenses, and the number of charges. OBTS can not track all of these factors.

When using this report, all limitations listed on page 32 should be taken into consideration.

The statistical analysis, research, and writing of the *Minnesota Convicted Felony Cases* was done by Daniel Storkamp. The technical production of the report was done by Sandy Henry.

Minnesota State Planning Agency

The Minnesota State Planning Agency is responsible for assuring that the State of Minnesota will benefit from integrated programs for the development and effective use of its human, physical, and financial resources.

Minnesota Statistical Analysis Center

The Minnesota Statistical Analysis Center conducts criminal justice analysis for policy development. The center has been operating for over ten years and is the only group to analyze all aspects of crime and the criminal justice system.

Other Contributions

This report was prepared for the Minnesota State Legislative Auditor. Funding was in part provided by a grant from the Bureau of Justice Statistics, U.S. Department of Justice, Washington, DC.

The data base used in this analysis was obtained from the official state criminal history file maintained by the Bureau of Criminal Apprehension, Department of Public Safety.

Executive Summary

Demographics. The number of felony arrests leading to conviction increased 16% from 1985 to 1988. Of these convictions, females have increased at a faster rate (24%) than males (15%). This may mean that the criminal justice system may need to make changes to accommodate this increase. All races have an increase in the total number of gross misdemeanor arrests leading to a conviction, but minorities have increased at a faster rate (African American 59%, Native American 24%) than nonminorities (Caucasians 8%). Nonminorities still are the most prominent group comprising over 90% of the total felony arrests leading to a conviction.

Area of Arrests. Of the felony arrests leading to a conviction in 1988, 56% were made on the seven-county metropolitan area (Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington). Of the arrests made in the seven-county metropolitan area, 60% were made in Minneapolis or St. Paul and 40% were in the remainder of the seven counties. A greater burden falls in the seven-county metropolitan criminal justice system, especially in Hennepin (Minneapolis) and Ramsey (St. Paul) counties.

Most Occurring Offenses. In 1988 the most common felony arrest leading to a

conviction was burglary (18%), followed by narcotics (14%), larceny (10%), and fraud (10%).

Time in System. The average number of days from arrest to court disposition for felony arrests leading to conviction increased 30 days from 1985 (237 days) to 1988 (267 days).

Outcomes. The most likely outcome for felony arrests leading to a conviction is a jail sentence (54%), followed by prison sentence (26%). This means 80% of the felony arrests leading to a conviction received a sentence of incarceration. The number of felony arrests receiving a jail or prison sentence increased 32% from 1985 (5,174) to 1988 (6,825). The average sentence for jail has decreased from 114.5 days in 1985 to 104.7 days in 1988. The total number of days sentenced to prison for all felony arrests leading to a conviction increased 13% from 1985 (429,261)¹ to 1988 (484,552).² The total number of days sentenced to jail for all felony arrests leading to a conviction increased 31% from 1985 (1,715,415)³ to 1988 (2,253,024).⁴ This means more felony arrests leading to a conviction are being sentenced to jail and prison for a shorter periods of time, but the total jail and prison sentences given are increasing.

1 1985 – number sentenced to prison (3,749) multiplied by average number of days (114.5).

2 1988 – number sentenced to prison (4,628) multiplied by average number of days (104.7).

3 1985 – number sentenced to jail (1,425) multiplied by average number of days (1,203.8).

4 1988 – number sentenced to jail (2,197) multiplied by average number of days (1,025.5).

Demographics of Felony Cases

Arrests Overall (Display 1)

The total number of felony arrests leading to a conviction increased 16% from 1985 (7,307) to 1988 (8,497).

Gender (Display 1)

The number of males increased 15% from 1985 (6,270) to 1988 (7,207).

The number of females increased 24% from 1985 (1,037) to 1988 (1,290).

In 1988, of the total felony arrests leading to a conviction, males were 85% and females were 15%.

Race (Display 1)

The total number of felony arrests leading to a conviction for all races increased from 1985 to 1988.

	1985	1988	% Change
White	5,816	6,294	+ 8%
Black	1,041	1,657	+ 59%
Indian	418	517	+ 24%

Caucasians decreased as a percentage of the total felony arrests leading to a conviction from 1985 (80%) to 1988 (74%).

African Americans increased as a percentage of the total felony arrests leading to a

conviction from 1985 (14.2%) to 1988 (19.5%).

Native Americans increased as a percentage of the total felony arrests leading to a conviction from 1985 (5.7%) to 1988 (6.1%).

Area of Arrest (Display 1)

Arrests made in the Metro – St. Paul/Mpls.,¹ Metro – Suburbs,² and Non-Metro counties³ increased between 1985 and 1988.

	1985	1988
Metro – St. Paul/Mpls.	31%	34%
Metro – Suburbs	21%	22%
Non-Metro Counties	44%	40%

In 1988, 56% of the total felony arrests leading to a conviction were made in the seven-county metropolitan area (Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, Washington counties).

Age at Arrest (Display 1)

Offenders under 25 years old decreased as a percentage of the total felony arrests leading to a conviction from 1985 (55%) to 1988 (50%).

Offenders 25 and older increased as a percentage of the total felony arrests leading to a conviction from 1985 (44%) to 1988 (50%).

1 All arrests made in Minneapolis or St. Paul.

2 All arrests made in Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, or Washington counties, excluding those arrests made in St. Paul or Minneapolis.

3 All arrests made in Minnesota, excluding arrests made in the seven counties stated above and non-county agencies.

Sentencing Information

Most Likely Outcome

(Display 10)

The most likely outcome for a felony arrest leading to a conviction is a jail sentence — 51% in 1985 and 54% in 1988.

Sentence

(Display 10)

Of the total felony arrests leading to a conviction, the following sentences were received:

	Percent of Total Receiving Sentence	
	1985	1988
Prison	20%	26%
Jail	51%	54%
Prison - Suspended	27%	27%
Jail - Suspended	13%	11%
Probation	77%	78%
Fine	14%	21%

(Percents do not add up to 100 due to offenders receiving multiple sentences.)

Prison. The number of offenders sentenced to prison increased 54% from 1985 (1,425) to 1988 (2,197).

The total number of days sentenced to prison for felony arrests leading to a conviction increased 31% from 1985 (1,715,415)¹ to 1988 (2,253,024).²

Note: This data does not reflect the 1/3 reduction of prison sentence given for "good time."

Jail. The number of offenders sentenced to jail increased 23% from 1985 (3,749) to 1988 (4,628).

The average jail sentence decreased 9% from 1985 (average 115 days of jail) to 1988 (average 105 days of jail).

The total number of days sentenced to jail for felony arrests leading to a conviction increased 13% from 1985 (439,261)³ to 1988 (484,552).⁴

Incarcerated Sentence Suspended. The number of offenders with prison sentence suspended increased 15% from 1985 (1,997) to 1988 (2,298).

Probation. The average probation sentence increased 17% from 1985 (average 1,489 days of probation) to 1988 (average 1,588 days of probation).

- 1 1985 - number sentenced to prison (3,749) multiplied by average number of days (1,203.8).
- 2 1988 - number sentenced to prison (4,628) multiplied by average number of days (1,025.7).
- 3 1985 - number sentenced to jail (1,425) multiplied by average number of days (114.5).
- 4 1988 - number sentenced to jail (2,197) multiplied by average number of days (104.7).

Flow of Adult Criminal History Information

(Display 17)

The numbers below correspond to the numbers on the flow of information in the attached diagram.

1. At the time of arrest, law enforcement agencies fingerprint the arrestee. Arrest information is filled out on the fingerprint card and is sent to the Minnesota Bureau of Criminal Apprehension, where it is scanned and a criminal history file is created or updated.
2. At the time of conviction, the judge pronounces a sentence for the offender. The deputy clerk of the court takes sentencing information from the court transcript and completes the form for the Minnesota Supreme Court. This form is either entered in the Trial Court Information System (TCIS) — a computer program online with the Minnesota Supreme Court — or the form is sent to the Minnesota Supreme Court to be entered in to the State Judicial Information System (SJIS). The information from TCIS is also downloaded to SJIS.
3. A second copy of the court information is sent from the Minnesota Supreme Court to the Minnesota Bureau of Criminal Apprehension. The Minnesota Bureau of Criminal Apprehension enters the court information in to the Criminal Justice Information System (CJIS).
4. The Minnesota Bureau of Criminal Apprehension is the custodian of many data bases that fall under CJIS. One part of CJIS is the Computerized Criminal History (CCH).
5. Once every year the Minnesota Statistical Analysis Center, Minnesota State Planning Agency, runs a computer program on the CCH to get Offender-Based Transaction Statistics (OBTS). OBTS is a case-based system (not individuals) for a given year of court dispositions.
6. At the Statistical Analysis Center, Minnesota State Planning Agency, OBTS data is transformed to comply with federal regulations and is sent to the Bureau of Justice Statistics, U.S. Department of Justice for national analysis.
7. OBTS is used by the Statistical Analysis Center, Minnesota State Planning Agency, for many type of reports. Some examples are: *Just Desserts, Firm Convictions, Minnesota 2010*, and County Court Information.
8. The U.S. Bureau of Justice Statistics collects OBTS from 17 different states. This data is compiled and used in many reports. Some examples are: *Sentencing and Time Served, Sentencing Practices in Thirteen States*, and *Felony Sentences in State Courts*.

Convictions — Percentage Missing

Hennepin County (Display 18)

The type of crime is determined by the level of offense at conviction and not the level of arrest. For instance, the arrest may be for a gross misdemeanor but the conviction is a misdemeanor. It would show up as a misdemeanor and not a gross misdemeanor.

MOC Code – Minnesota Offense Code. For further explanation of this MOC Code, contact the Bureau of Criminal Apprehension, Minnesota Department of

Public Safety (BCA) or the Minnesota Statistical Analysis Center, Minnesota State Planning Agency.

Number Missing. This is the number of fingerprint cards missing from Hennepin County (1988) on December 22, 1989; as reported by the BCA.

Number in OBTS. This is the number of cases in the OBTS data base on July 1990, as reported by the Minnesota Statistical Analysis Center, Minnesota State Planning Agency.

Limitations of Data Base

The Minnesota OBTS has many limitations: 1) the offender's prior criminal history is not contained in the OBTS; 2) data are not timely; 3) individuals are counted more than once if they are arrested twice in the same year; 4) individuals not in the Computerized Criminal History (CCH) will not be in OBTS; and 5) some of the 110 variables in OBTS are unusable for Minnesota.

The OBTS does not contain any individual's prior criminal history. One of the major factors in Minnesota's sentencing is the criminal history. The lack of this information limits the type and degree of analysis with OBTS on sentencing.

The second limitation is time delays. Before the computer program can be run on CCH for OBTS, information has to be entered into the CCH. Because of the vast amount of information being entered into the CCH, data entry has a few months lag. Another time delay is that the computer program for OBTS is only run once a year, due to the cost of running the program on the entire CCH. For that reason, OBTS is run after most of the past years data has been entered in the CCH (Usually around August 1).

The third limitation is if an individual is arrested for different crimes in the same year, this individual will be in OBTS for

each arrest. No individual can be tracked in OBTS because OBTS is a case by case data base.

The fourth limitation is that if an individual is not in the CCH data base, they will not be in OBTS. Individuals are only entered into the CCH if they have positive identification with the arrest report (a fingerprint card is present). If the fingerprint cards are not readable or if the arresting agency neglects to send the offender's fingerprint card to the BCA, that arrest will not show up on the offender's CCH and will not be in OBTS. Analysis on the preceding pages is a sample of what cases are missing for Hennepin County in 1988.

The fifth limitation is that some of the variables in OBTS are unusable. OBTS was originally created to follow a case through the criminal justice system. Each Segment was to report on cases passing through their area—arrest, prosecution, courts, corrections. In creating OBTS from the CCH, some original variables cannot be obtained.

The OBTS limitations only affect some analysis and a small portion of the entire OBTS data set. (For more information on the limitations of OBTS, contact the Minnesota Statistical Analysis Center, Minnesota State Planning Agency.)
